

Version 1

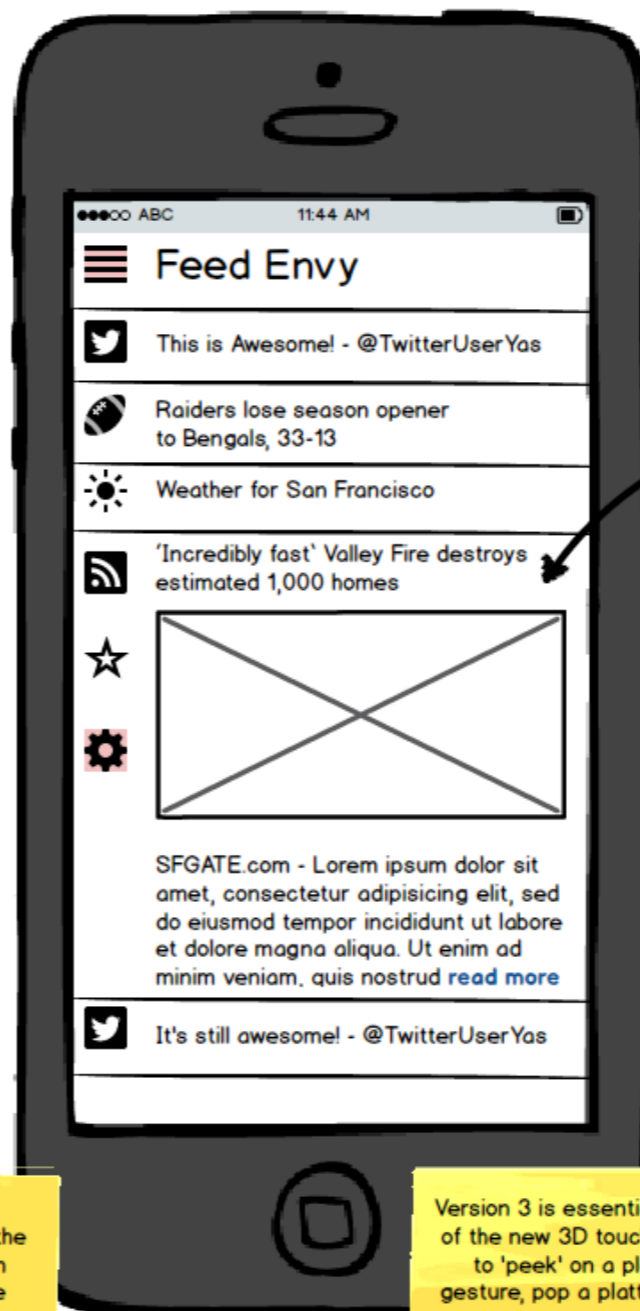

Version 2

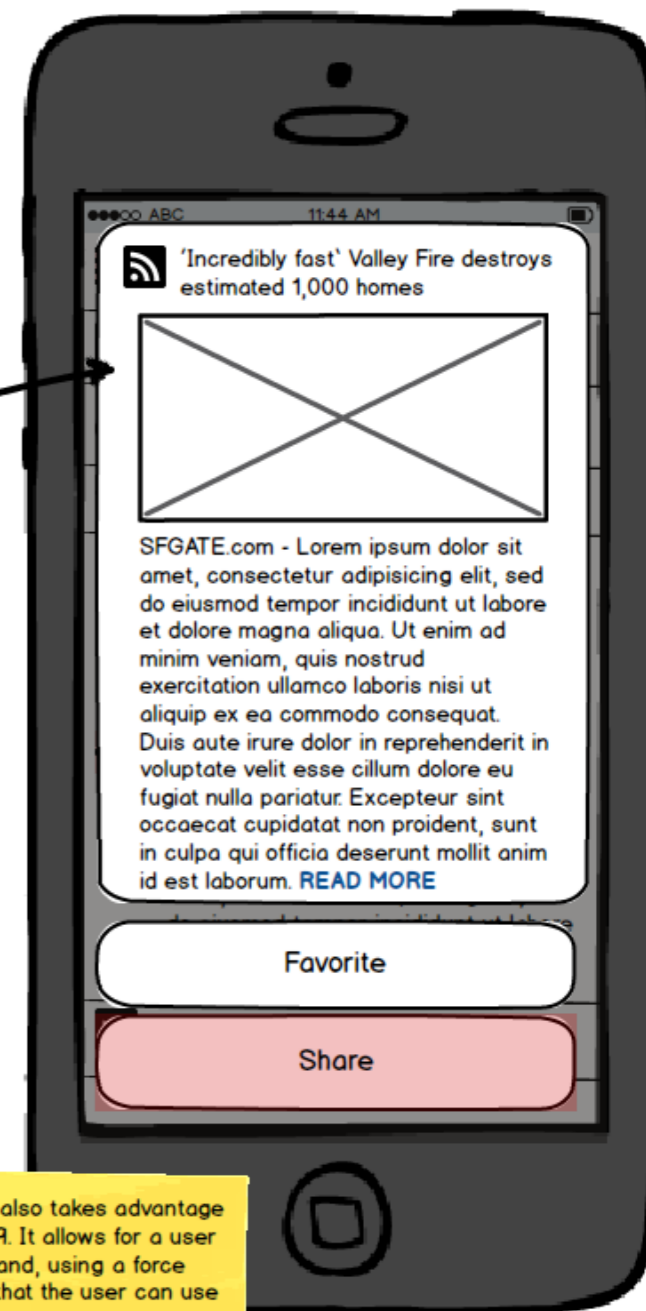

Version 2 is more of a tabular 'minimized' view of data that, when the user taps on a table, they can then preview not only the content of the article, but also the share and favorites settings. There is an option for the user to click on 'read more' which, on iOS 9, takes them into a webview of the article.

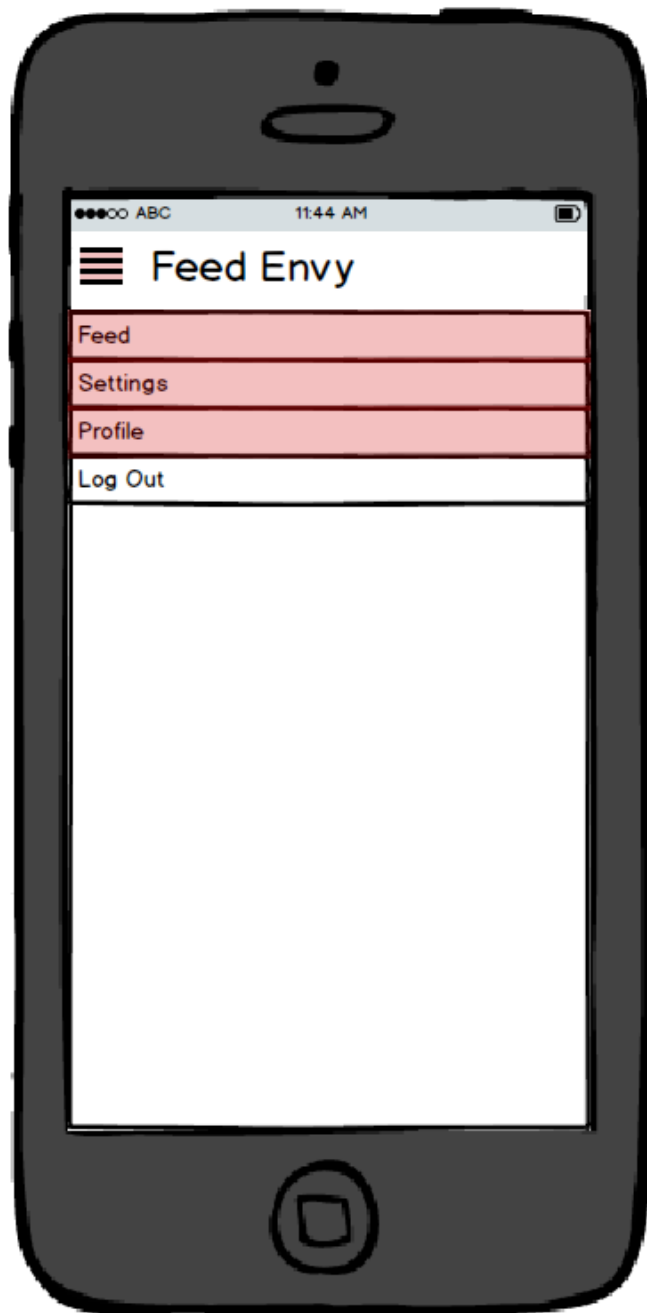

Version 3 - iOS9 Compatible

Version 3 is essentially version 2, but it also takes advantage of the new 3D touch that is part of iOS9. It allows for a user to 'peek' on a platter of information and, using a force gesture, pop a platter onto the screen that the user can use to preview content.

Version 3 - iOS9 Compatible
